P.O. Box 58

Aberdeen, MD 21001

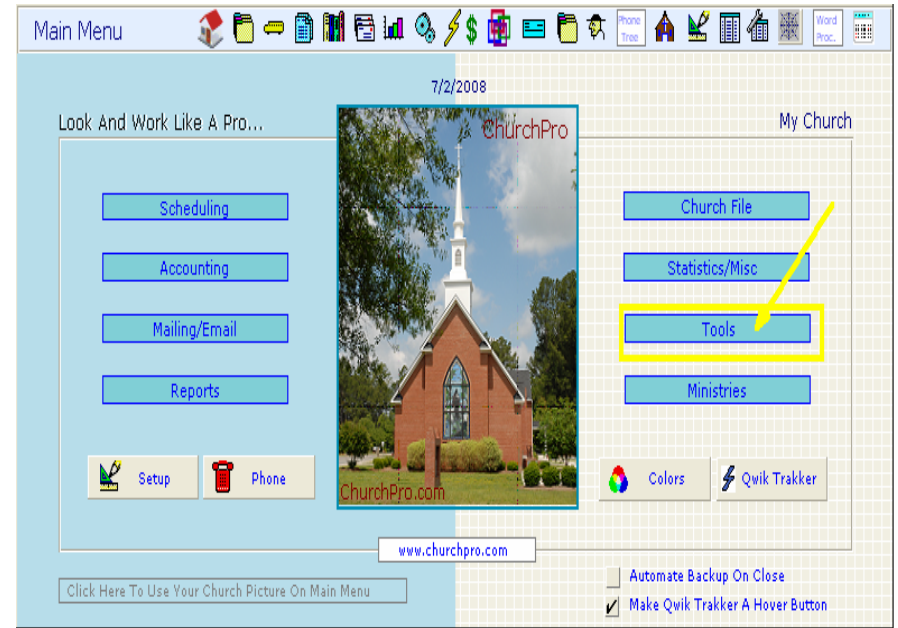

- When You receive this error, write down what file the program can not open, then click “NO”.

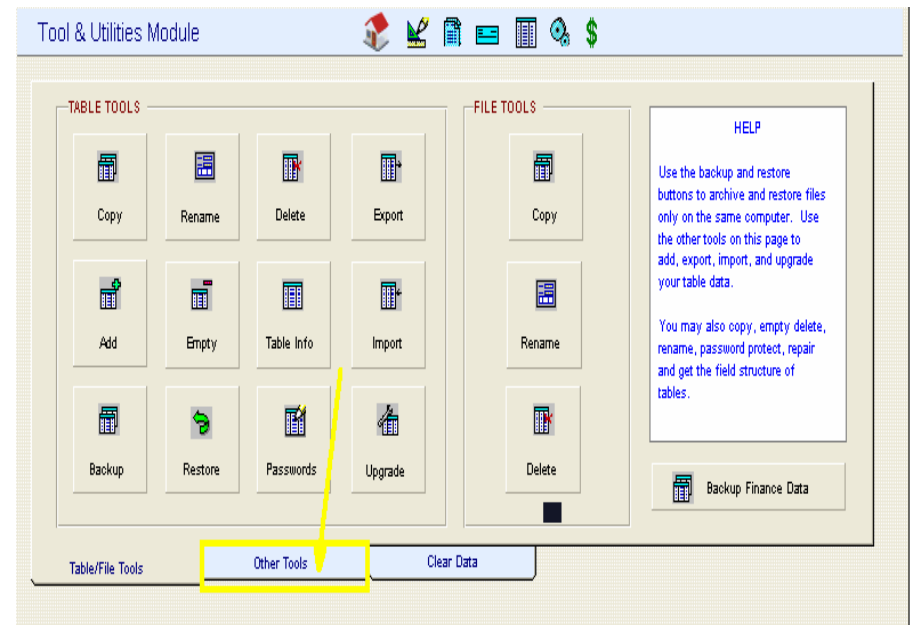

- If This message box does not go away, close it by clicking the red “X” at the top of the box.

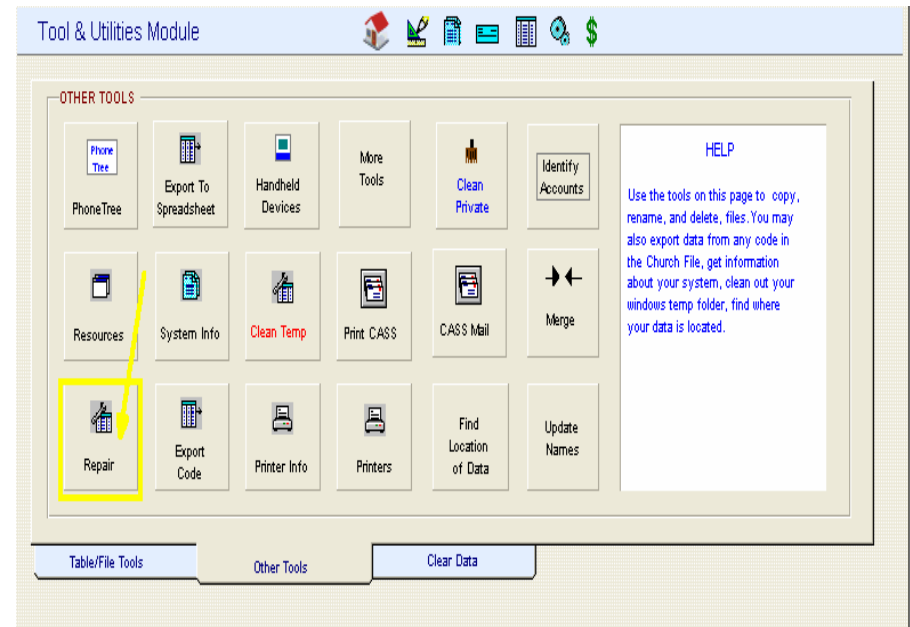

- Click on the “TOOLS” module.

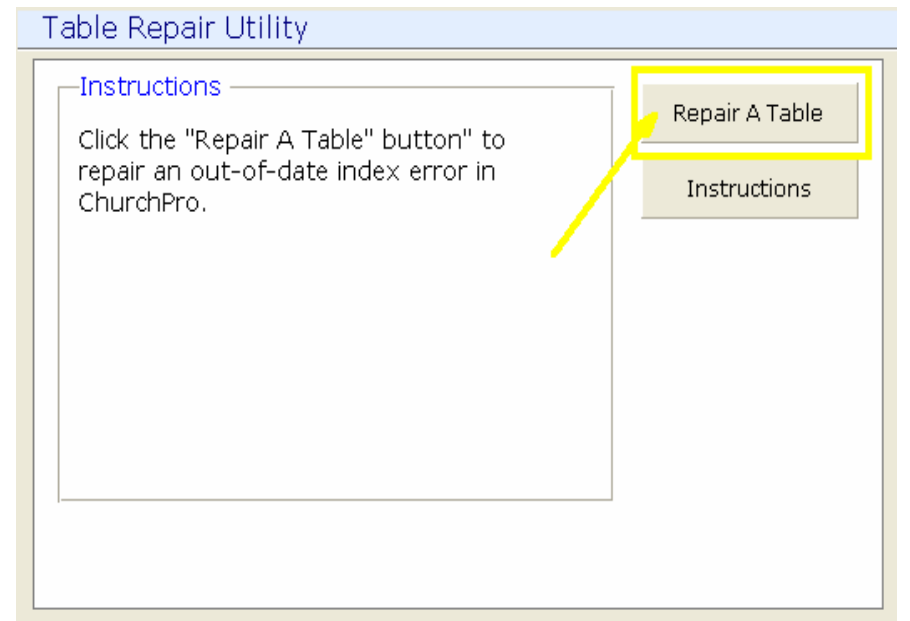

- Click on the “OTHER TOOLS” tab.

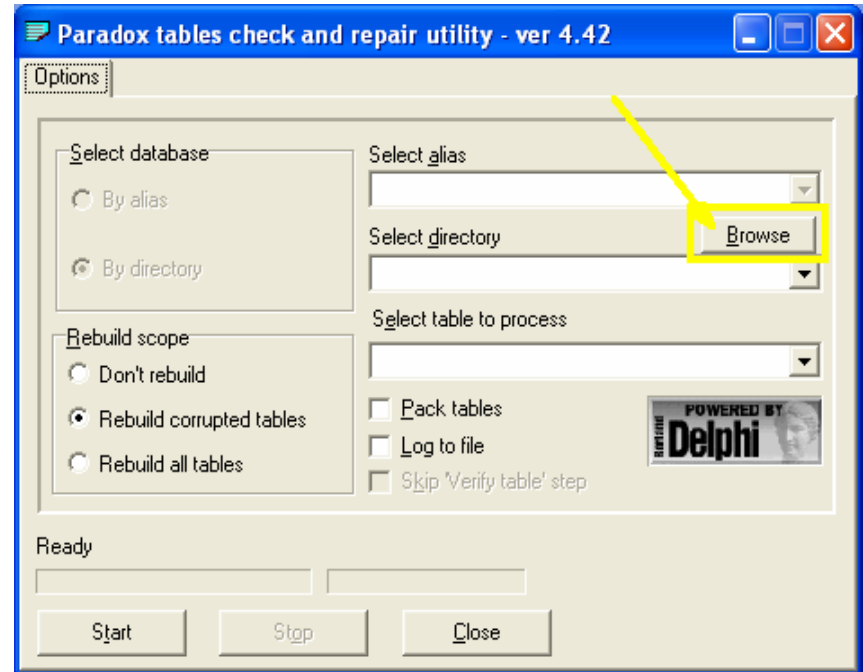

- Click on the “REPAIR” button.

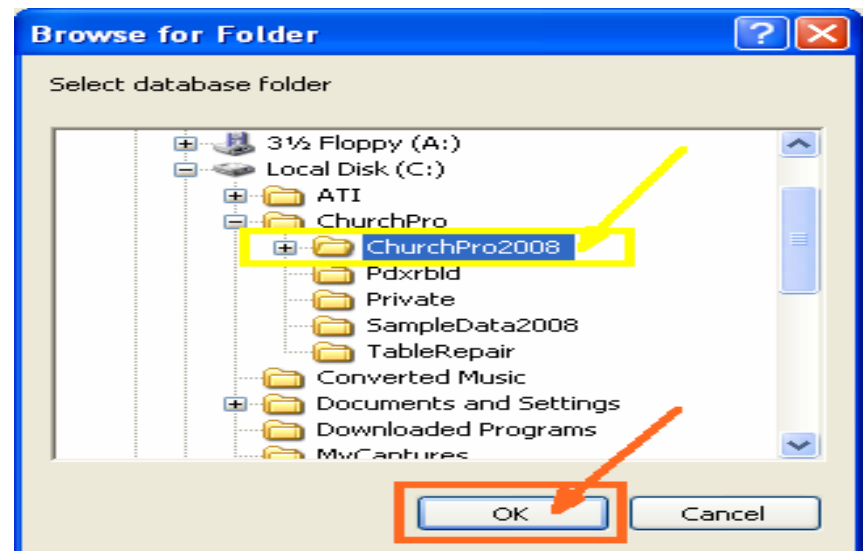

- Click on the “REPAIR A TABLE” button.

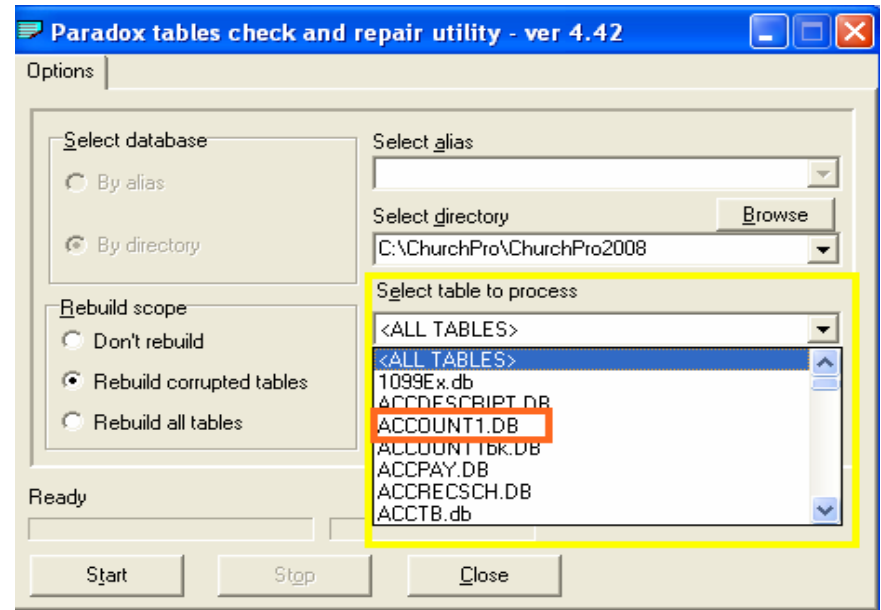

- Click on the “BROWSE” button.

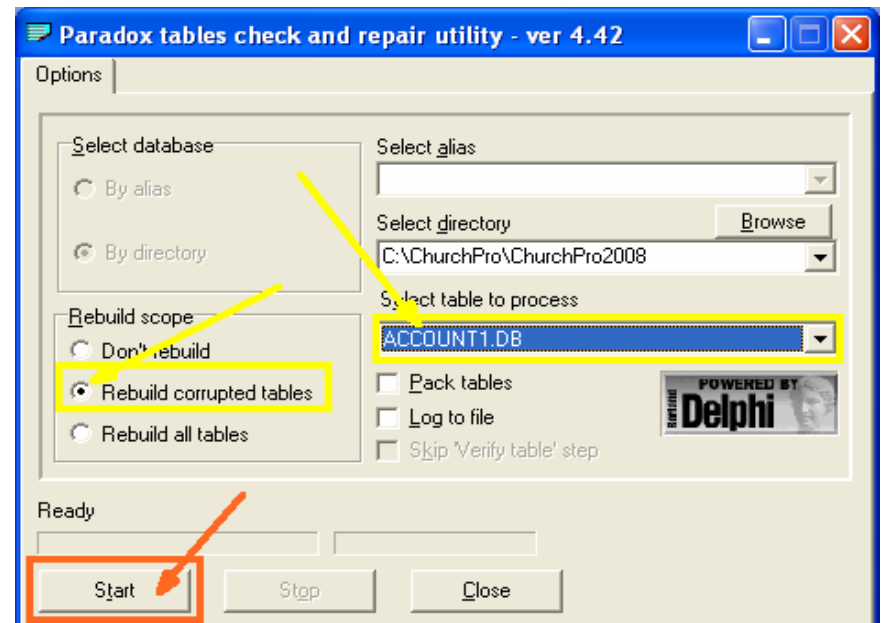

- Browse until you reach your “CHRUCHPRO2008” folder. For most users the location is C:\churchpro\churchpro2008. Then click on “OK”.

- Find the DB file that gave you the error, under “SELECT TABLE TO PROCESS”.

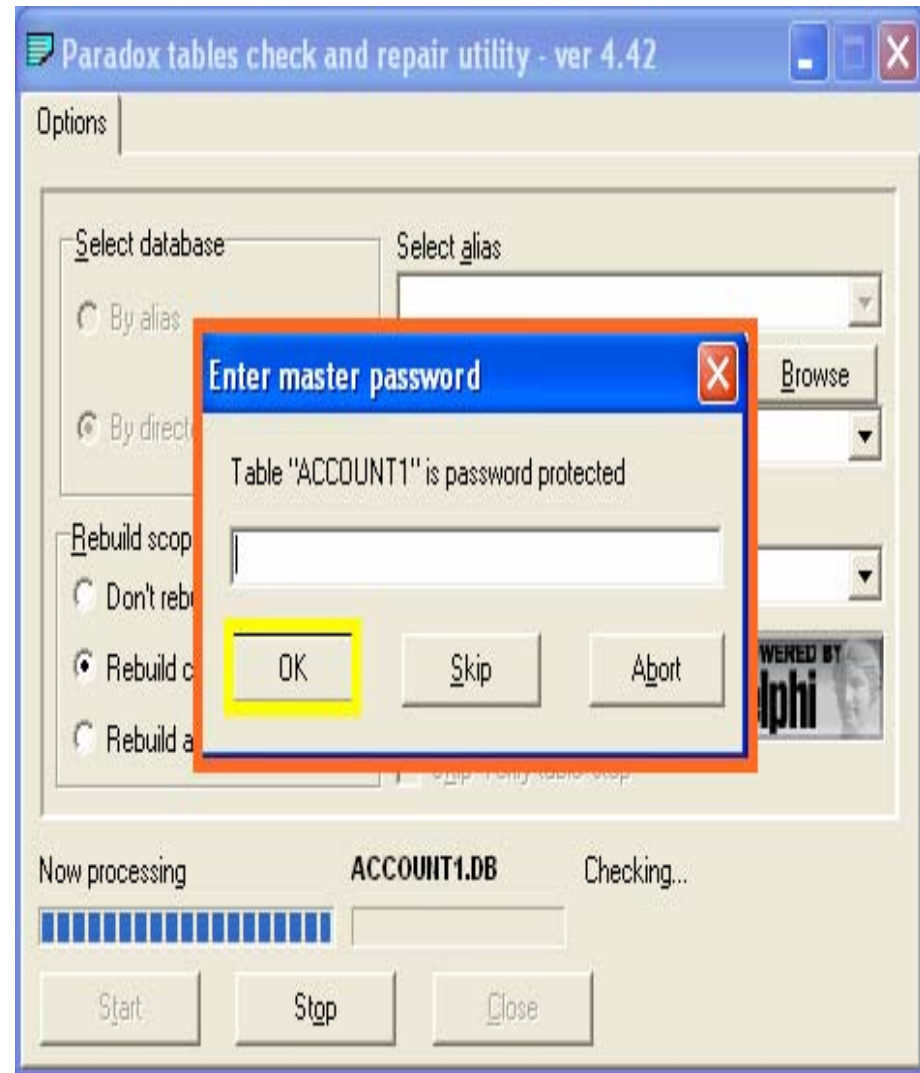

- Make sure it is the correct file and make sure “REBUILD CORRUPTED TABLES” is checked. Then click “START”.

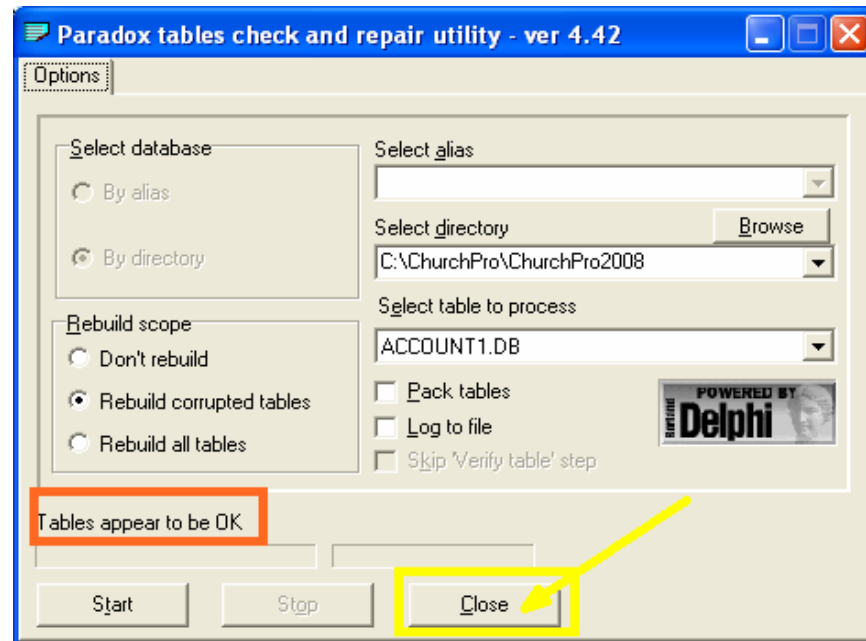

- If your table is password protected you must provide a password to continue. Then click “OK” .

If you don't know the password speak to your System Administrator.

If this box does not show up, do not be alarmed just move on to the next steps.

- After the program is done it should say "TABLES APPEAR TO BE OK". If not just hit the "START" button again. Then click "CLOSE".

- You may continue to work with ChurchPro. If there is still an issue please call our ChurchPro Support Staff.
